## ABOUT ME

I am an active student at Pembangunan Jaya university, Information Systems Study Program. I am currently in semester 6. I am very passionate about anything related to technology, especially to build or develop computerized systems. For that I like to learn programming and analyze systems. I really like both of these fields. From semester 2 I started learning programming like javascript, php, go and other technologies to build a website. Of course, at this time my expertise is building a website and also analyzing all the necessary system requirements.

---

## EXPERIENCES
